

lightpanel

LED Lightpanel

Designed and manufactured in the UK, the Lightpanel combines the latest LED technology and our unique engraving patterns, producing bright even illumination across the entire panel.

Available in a range of colour temperatures 6500k, 5000k, 3800k and 2800k, and in single colours of red, green and blue. We also manufacture RGB panels, which can either have simple dimmers or programmable DMX controllers to drive and sequence the panels.

The 24volt LEDs are housed in a purpose designed aluminium heat sink, allowing them to run effectively at temperatures in excess of 65 degrees centigrade. The option of being silicon coated for external use makes this one of the most robust systems available.

For consistent brightness and excellent colour rendering, our Lightpanels are designed to use KKDC LEDs. Smaller panels can have lux levels of up to 8750 per square metre, even with a maximum size of 3m x 2m we can still offer lux level of around 2000 per square metre.
