

Mayfair Casino Roof Terrace

Combining Form and Function

We were asked by the architects Jestico & Whiles to work with them to design and manufacture the roof terrace canopy of Playboy's new casino in Central London.

Our flatbed printer was used to create hi-resolution UV images direct onto the building material; something we specialise in. The client did not want standard panels with a retro-fit graphic, which is why we proposed the bespoke panels, utilising our expertise.

Particular care was taken in referencing the image to each ACM panel in order to create a large seamless graphic on the installed soffit. The panels were then folded to form part of the canopy to fix onto the structural steel frame.

The NES installation team then worked alongside Phelan Construction to bring to life the architect's vision.
