

# RGB Colour Changing Lightwall

## Lewisham Shopping Centre

When asked, NES jumped at the opportunity of creating an eye-catching entrance way to the Lewisham Shopping Centre revamp. The result is a stunning high impact colour changing lightwall over 40 metres in length!

The 128 Lightpanels are individually controlled with mini DMX cards and pre-programmed to smoothly run through 4 sequences.

NES combined Alucobond wall cladding and flat panel RGB lighting technology to create this striking feature.

This particular type of system is designed to provide a very low maintenance solution, which architects and clients alike are eager to obtain.

NES continue to be market-leaders in their industry by investing heavily in the research and development of flat panel lighting technology.
